AutoFresh

AUTOMATIC
FRESH AIR
for high-respiring
CARGOES

AutoFresh™ : *Reliability and convenience* for high-respiring perishable cargoes.

High-respiring, perishable cargoes require reliable refrigeration and accurate, consistent fresh air exchange. Carrier Transicold's AutoFresh option provides the fresh-air that high-respiring products need, using the industry-standard MicroLink ML2i controller to ensure accurate and precise operation. With AutoFresh, accurately programming the fresh air settings is as convenient and as easy as setting the temperature—eliminating the need for manual intervention while containers are in transit. And when equipped with AutoFresh, Carrier's DataCorder™ provides comprehensive trip records documenting all fresh air settings and changes.

SUPERIOR *flexibility & convenience.*

- Set to automatic or manual control
- Adjust maximum time to open air exchange
- Set temperature range to open and close AutoFresh slide

AutoFresh

SUPERIOR product *protection.*

- Enhance cargo quality with high-respiration loads
- Maintain reliability and consistency for every container—before the trip
- Air exchange activates according to return air temperature—maintaining product integrity
- Settings are restored after any power interruption

SUPERIOR customer *satisfaction.*

- DataCorder provides trip documentation, quality assurance
- Faster pull-down and lower energy costs
- Higher quality out-turn
